## Instructions for submission

### *Subject 101*

Try to give an easy insight into something that is usually considered tough in medicine (hyponatremia, tubular acidosis, leukocyte differentiation, osmolality- and anion gap, coagulation disorders, etc.). Try to do this in your own original way and give it your best shot! Think out of the box with a new approach. **Maximum amount of words: 500-750. Maximum of one illustration/figure.**

As a format you can use:

- Describe the problem/issue (+/- 50 words).
- The regular way to explain this problem/issue (+/- 150 words).
- The/your new way to make this problem/issue conceivably (+/- 450 words).
- Possible limitations of this new approach.

#### **Submission**

Please submit your column as a word-document via [www.amsj.nl](http://www.amsj.nl).
