

Instructions for submission

Subject 101

Try to give an easy insight into something that is usually considered tough in medicine (hyponatraemia, tubular acidosis, leukocyte differentiation, osmolality- and anion gap, coagulation disorder, etc.). Try to do this in your own original way and give it your best shot! Think out of the box with a new approach.

As a format you can use:

1. Describe the problem/issue (+/- 50 words).
2. The regular way to explain this problem/issue (+/- 150 words).
3. The/your new way to make this problem/issue conceivably (+/- 450 words).
4. Possible limitations of this new approach.
5. One or two figures/images can be added, depending on the size of the manuscript and the figures.

Maximum amount of words: 500-750.

Please submit your column as a Word-document via www.amsj.nl.
